

**Improved transparency leads to better trades. The Footprint® chart provides traders with better organized price and volume data and helps to uncover patterns and opportunities. It is also used to confirm or deny trading ideas, reflect market psychology in a real time manner, and allow traders to have more confidence in their trading decisions.**

Filters the noise see inside the price bar for clues to whether price is strengthening or weakening – as price trades, not after the fact.

**Increased Transparency** – The Footprint® chart improves price transparency by displaying each bar broken down price by price. This allows for a crystal clear interpretation of where volume is occurring and how it is entering the market.

Noisy markets produce very specific volume patterns, whereas, directional markets produce very different volume patterns.

**Compliments Existing Methodologies** – used to confirm other indicators and strategies by gauging supply and demand. Compliments Market Profile® very well by providing necessary volume information at key areas, thus allowing for much better timing of your trades.

**Spot Pivot Points With Greater Accuracy** – the primary characteristic of the Footprint® is to provide greater detail of underlying market dynamics.

**Track Volume Intra-Bar** – as a bar builds, the Footprint® chart will provide an inside view of the market so that you can position and react prior to other market participants. This will allow for more timely entries and exits because you are looking inside the bar instead of waiting for it to close and then gauging market sentiment.

## BENEFITS

**Track Order Flow** – Combining price with total volume and bid / ask volume creates unprecedented accuracy for short term price rotations

**Multiple Chart Types** – Time, tick count, volume bars, range bars, change bars, tick reversal (point & figure) are all available

**Execute With Greater Precision** – Time your entries & exits with much greater precision

Tracks volume with price to produce a multi-dimensional display

**Gain Confidence** – Follow and better understand order flow to the bid and ask

Each Footprint combines price and volume to act as a thermometer of price strength and then alerting through color

**Filters The Noise See Inside** – the price bar for clues to whether price is strengthening or weakening

**Improved transparency leads to better trades** – The Footprint(R) chart provides traders with better organized price and volume data and helps to uncover patterns and opportunities.

**Interpret Market Psychology** – The Footprint® chart offers the best interpretation of market psychology because it summarizes how traders are entering their orders and where the most volume is accumulating.

Each footprint combines price and volume to act as a thermometer of price strength and then alerting through color. This allows for greater sensitivity to price movement which leads to understanding.

**Gain Confidence** – follow and better understand order flow because you can see and quantify actual transacted volume.

Implement with existing technologies - works with popular vendors such as Bloomberg CQG, eSignal, IQfeed, Opentick & Interactive Brokers.

There are various ways to view the Footprints®. Please refer to the other product information sheets or videos for more information of specific Footprint® types.

## TECHNICAL SPECIFICATIONS

### Minimum System Requirements

- Windows 2000, Windows XP, Windows Vista
- Windows Updates are highly recommended
- 2 GHz Pentium processor
- 17" or larger Monitor with minimum 1024x768 resolution
- 2 GB RAM Recommended
- 100 MB available disk space
- Cable, DSL or higher Internet connectivity
- Microsoft Internet Explorer browser version 5.5 for downloading
